1 Entrepreneurial Continuum

The purpose of this course is to unpack what we mean by “mindset”. We’ll discuss how this concept is relevant to us as educators, and how we can design educational interventions to impact our students. As we explore habit of mind and thinking patterns, think about how behavioral motivations, attitudes, and skills influence entrepreneurial outcomes. How can these be developed within engineering education to encourage students’ future success?

By the end of this course, you should be able to:

- Define the concept of mindset and how it applies to engineering education
- Explain why an entrepreneurial mindset is vital for your students’ future success
- Identify how you can apply the KEEN

2 Mindset + Skillset

Before we proceed, let’s look at examples of mindset and skillset, and how these should co-exist together.

Take Action!

How can you teach mindset?

3 Impact as an Educator

Continuing our journey, we’ll explore research and ideas related to thinking patterns and mindset. As Doug dives into each of these, consider how these may be applied on your campus to enhance engineering education.
